SUMMARY

AI & Machine Learning Engineer with hands-on experience building AI-powered applications and machine learning models. Skilled in developing LLM-based systems and intelligent APIs using Python and FastAPI. Focused on transforming data into scalable, automated solutions with measurable impact.

CORE SKILLS

Machine Learning & AI

RAG, LLM, Embeddings, vector database, Supervised & Unsupervised Learning, Model Evaluation & Optimization

Languages

Python

Data Science & Analytics

Data Cleaning, Feature Engineering, SQL, ETL

Cloud & Web

AWS (EC2, S3), Google Cloud, Model Deployment, ReactJS, Hooks, Javascript.

EDUCATION

MIT School of Computing

2022–2026

B.Tech. — Information Technology

CGPA: 7.26 / 10

PROJECTS

AgroInspect – Smart Crop Recommendation System

- Developed a machine learning-based crop recommendation system using the Random Forest algorithm to predict profitable crops based on soil parameters such as pH, Nitrogen (N), Phosphorus (P), and Potassium (K) values.
- Implemented data preprocessing, feature selection, and model training in Python, improving prediction accuracy and enabling farmers to receive data-driven crop suggestions for better yield and profitability.
- Built an interactive web application using Flask, HTML, CSS, and JavaScript that allows users to input soil data and instantly receive personalized crop recommendations.

AI Wealth Manager

- Developed an AI-powered personal finance management application that enables users to track expenses, manage budgets, and gain personalized financial insights through an intuitive dashboard.
- Implemented OCR-based receipt scanning and machine learning-driven expense categorization to automate transaction recording, generate financial summaries, and improve the accuracy of expense tracking.
- Built a responsive web application with an interactive dashboard that visualizes spending patterns, savings, and budget performance, helping users make informed financial decisions through real-time analytics.

Post-Discharge Medical AI Assistant with RAG

- Developed a Retrieval-Augmented Generation (RAG)-powered multi-agent healthcare assistant using FastAPI, FAISS, and Mistral-7B, managing over 100 post-discharge patient records with nephrology reference integration and real-time web search.
- Achieved 90%+ retrieval accuracy and seamless coordination between Receptionist and Clinical Agents through vector-based semantic retrieval and Hugging Face Inference API for safe, contextual medical responses.

Career AI Assistant – AI-Powered Career Guidance Platform

- Developed an AI-powered career platform for resume analysis, skill gap detection, job matching, and career recommendations using React, FastAPI, Python, and Supabase.
- Implemented resume scoring, role prediction, skill extraction, and career roadmaps using TF-IDF, Naive Bayes, fuzzy matching, and resume parsing.
- Built a responsive SaaS interface with AI mentor/chatbot features and Vercel-ready deployment.

CERTIFICATION

- Python
Subjects: Certificate for the Completion of Python Training (80 / 100)
- AWS Graduate – Cloud Fundamentals Training
Subjects: Cloud Computing Basics, AWS Services Overview, Deployment and Infrastructure Concepts
- UX Foundations: Research
Subjects: User Research Methods, User Interviews, Journey Mapping, Usability Testing.
- Certificate for the Completion of Python 3.4.3 Training
Subjects: Python Fundamentals Object-Oriented Programming (OOP), Functions, File Handling, and Problem Solving.
